

QA Engineer

We are looking for a software QA with 1-2 years of experience who really like what they do.

Code932 is a team of 15 people who work hard and play harder. We help each other, we teach each other a lot of things and we support each other in everything that we do. We like to be challenged and we love complex projects. Quality is one of our core values and we believe that proactivity makes it happen.

If the following words describe you, we'd really love to meet:

Soft-skills:

- funny
- smart
- honest
- motivated
- responsible

Technical requirements:

- 1 - 2 years of experience in Software QA
- Knowledge of Manual & Automation testing
- Knowledge of software testing methodologies and techniques
- Experience in Web testing
- Experience in functional and non-functional testing, usability and reliability testing
- Scripting experience (Python, Perl, Bash etc)
- Basic programming knowledge (HTML, CSS, Javascript, SQL) and automated testing tools knowledge (like Selenium)

Nice to have:

- Knowledge of Web technologies or programming
- Load and stress testing experience, automation testing experience

Responsibilities:

- Designing test cases
- Implementing scripts for automation
- Test execution
- Reporting bugs, re-testing

What we offer:

- the great feeling of being part of an awesome team who achieves everything they have in mind.
